Q: How to setup and get data from RESTful API in ASP.NET MVC? Is it possible to get data from RESTful API in ASP.NET MVC? I want to get images from an API with GET requests and save them in a cache system. I guess it is possible, but I don't have an idea how to solve this. Anyone has any suggestion what I can do? I am using ASP.NET MVC version 4 and Razor Syntax. A: ASP.NET MVC has built in feature to generate the proper URL and actions. Try this It should get you going. If that still gives you problems, try this: A: Have a look at Moq - Q: mysql select max i have a table id | name | detail and i have a query select * from myTable where id >? now i want to select the detail where the id is the max id, how can i do that? (mysql 5.5.30) A: select detail from myTable where id = (select max(id) from myTable) but I would suggest to run just this query SELECT * FROM myTable ORDER BY id DESC LIMIT 1 If you want to get rows from a single row you should use LIMIT clause. There is a slight difference between LIMIT and OFFSET but when you have only one row you can use OFFSET clause without any consequences. So it can be select * from myTable ORDER BY id DESC LIMIT 1 OFFSET 0; or SELECT * FROM myTable WHERE id = (SELECT MAX(id) FROM myTable) A: The correct syntax would be select detail from myTable where id = (select max(id) from myTable) Also, do not use * in your queries unless you are not sure what is the type and/or structure of your fields. Thus, the correct query would be select
