

CES 2011: Converged big-box customers' need for physical data center relieved Wednesday, January 5th, 2011 by Todd Blankenship, Editor of Data Center Knowledge At the big-box retailer's CES press event, we found the company's description of its strategy to offer customers a consolidated data center, a DCO as it was called, to be positive and even a little novel. In our conversations with several customers, however, many said they would very much appreciate a consolidated data center. "Let's put the data center back where it belongs: in the merchant's backroom," said Scott Guthrie, SVP of merchant services, chargebacks, and analytics at Wal-Mart, at a keynote presentation here Tuesday. "DCOs will produce benefits for customers and generate significant savings for us, as you've seen in our data centers." Guthrie said that customers who want the benefits of the consolidation all along will have them. Consolidated DCOs were the hot new thing at the big-box retailer's DCO event, held in conjunction with the show, in January 2010. The DCO strategy is gaining momentum among big-box retailers as a way to increase the efficiency of their data centers and ease the management of their systems and IT. At Wal-Mart, they still run all their data center operations and manage their software and hardware from their home office. Wal-Mart's DCO portfolio stands at around 800,000 square feet, including over 200,000 square feet of DCO, with the number growing as it grows its portfolio. The traditional way of doing things is to have DCOs run a fully deployed data center, including servers, storage and networking, which may be as big as the retailer's own operation. They then manage those systems. The biggest problem with this approach is that it takes time and people to roll out changes, add capacity and everything else, then roll back when the hardware that caused the problem is fixed, and they need more capacity. With DCOs, only software and basic hardware changes are needed, and there is minimal impact on the original hardware, which means no rollbacks are needed, according to Steve Caldwell, director of advanced solutions at Wal-Mart. The company has run several of these pre-builds, including one in Seattle in 2010, and he said the process has worked well. "This transition to DCOs is not about giving up the data
